## DEMOCRATIC TICKET

For President.  
 WOODROW WILSON,  
 of New Jersey.

For Vice President.  
 THOS. R. MARSHALL,  
 of Indiana.

For Congress  
 D. H. KINCHELOE,  
 of Hopkins County.

For Circuit Judge  
 CHAS. H. BUSH,  
 of Christian County.

The frost damage done to the Wis-  
 consin tobacco crop is estimated at  
 \$1,000,000, and makes 40 per cent of  
 the standing crop a total loss.

Fumigating stations will be estab-  
 lished by the federal government at  
 El Paso, Texas, and at Eagle Pass,  
 Laredo and Brownsville. Every per-  
 son entering Texas from Mexico will  
 be fumigated as a precaution against  
 disease.

National guardsmen from New  
 Hampshire, Pennsylvania, New Jer-  
 sey, District of Columbia, Virginia,  
 New York, Alabama, Georgia, Con-  
 necticut, Florida, Michigan, Minne-  
 sota, Colorado and California have been  
 ordered to the border. On arrival  
 General Funston was ordered to se-  
 lect ten thousand guardsmen and re-  
 turn them to the state mobilization  
 camps.

Teachers in Pittsburg public schools  
 who wed after they sign yearly con-  
 tracts with the Board of Education  
 cannot be removed from their posi-  
 tions until their contracts expire, ac-  
 cording to a ruling of J. Rogers Mc-  
 Creery, counsel for the Board of  
 Education. Heretofore it has been  
 the rule that when a teacher married  
 she forfeited her position.

Tobacco valued at \$15,000,000, of  
 which \$2,000,000 worth is the prop-  
 erty of American companies, is being  
 removed to the interior by Bulgarians  
 from storage warehouses at Greek  
 seaport of Kavala. Garrett Droppers,  
 the American Minister to Greece, has  
 asked the Bulgarian Government to  
 permit the American stocks to be  
 taken out of the town and brought  
 there.

The discovery by the Conservative  
 Commission that the greater part of  
 the oysters along the western shore  
 of the Chesapeake Bay have been  
 killed, has caused a sensation among  
 those who are in the oyster business,  
 as well as consumers of this greatest  
 product of the bay. From conserva-  
 tive estimate, based on what the Con-  
 servative Commission has found by  
 actual examination, it is said that at  
 least two-thirds of the catch on the  
 western shore is dead.

The Census Bureau has issued a  
 preliminary statement on tobacco  
 manufacturers. The statement gives  
 a comparative summary for 1914 and  
 1909. In that five-year period there  
 was a decrease in the number of es-  
 tablishments manufacturing tobacco  
 from 15,622 to 13,951 and a decrease  
 in the number of owners from 17,634  
 to 15,200. All other items show in-  
 creases. The number of persons en-  
 gaged in the manufacturing of tobacco  
 increased from 197,637 to 210,894.  
 The capital invested increased from  
 \$245,680,000 to \$303,840,000.

## SEVERE LOSS BY LEAF CURL

Disease is Responsible for Failure of  
 Peach Crop in Some Orchards—  
 Use Bordeaux.

It has been estimated that leaf curl  
 causes an annual loss of two millions  
 to three millions of dollars to the  
 peach industry of the United States.  
 It is largely responsible for the failure  
 of the peach crop in some orchards  
 and for the short life of the trees.

The most familiar aspect of the dis-  
 ease is the swollen, distorted appear-  
 ance of the leaves in the early spring.  
 When the disease first becomes appar-  
 ent, the swollen portions of the leaves  
 are usually of a light red or pink color.  
 The affected leaves gradually turn yellow,  
 finally blacken and fall to the  
 ground. In some cases the trees may  
 be nearly defoliated, thus making it  
 necessary to develop an entire second  
 crop of leaves. This is a severe strain  
 upon the vigor and reserve energy of  
 the tree, and unless it is well culti-  
 vated, sprayed and fertilized it may  
 be permanently weakened. The curl-  
 ing and distortion of peach leaves  
 may also be caused by aphid or plant  
 lice, but the attack of these insects

 Lime-Sulphur in Early Spring Before  
 Buds Started.

can readily be distinguished from that  
 of leaf curl. The leaves affected by  
 aphid do not become thickened and  
 reddish or yellowish green in color.

The spores of this fungus live under  
 the rough bark and in the crevices of  
 the twigs during the summer and win-  
 ter months, germinating early in the  
 spring and attacking the young leaves  
 as soon as the leaf buds begin to ex-  
 pand. Cold, wet weather during the  
 months of April and May favors the  
 development of the fungus and largely  
 determines the amount of injury.

Warm, dry weather tends to check the  
 growth of the fungus and under such  
 conditions the injury is slight.  
 The disease can readily be con-  
 trolled by a thorough application of  
 concentrated lime-sulphur before the  
 buds open in the spring. Bordeaux  
 mixture, applied early in the spring  
 before the buds start, also will control  
 leaf curl, but the lime-and-sulphur  
 mixture is advisable because it will  
 control San Jose scale as well.

## RICH SOIL FOR RASPBERRIES

Northern Slope is Generally Better  
 Than Southerly One—Keep Land  
 Well Cultivated.

Raspberries do well on any rich  
 soil, but the suckering classes, which  
 include chiefly the red varieties, pro-  
 duce rather better in less heavy loam,  
 while the black-cap varieties do best  
 in a sandy loam. A northern slope is  
 generally better than a southerly one,  
 as it is less liable to injury from  
 drought.

All varieties need high cultivation.  
 Have the land well manured and thor-  
 oughly plowed and brought into the  
 best condition possible. The best fer-  
 tilizer is well-rotted manure. Set in  
 rows seven feet apart and at three-  
 foot intervals in the rows. Put two  
 plants at a place. The distance be-  
 tween the rows may be lessened to  
 four feet if more space is not avail-  
 able. Set in the ground about the  
 depth in the soil as the plants natu-  
 rally grow. Firm the soil well around  
 the roots.

Not more than two shoots should be  
 allowed to grow from large root  
 each year, and these should be pruned  
 off when 18 inches high to encour-  
 age the growth of lateral branches,  
 because the raspberries fruit more  
 heavily on the laterals than on the  
 main cane. Keep the soil well culti-  
 vated.

## RED AND BLACK RASPBERRIES

Plants Should Have Shallow Culture.  
 as Roots Are Near Surface—Crop  
 Is Profitable.

Red and black raspberries should be  
 set six by six, which will require 1,210  
 plants per acre. These plants must  
 have shallow culture, as their roots  
 are all near the surface. Many fine  
 plantations are almost ruined by deep  
 culture. The crop is profitable when  
 picked on time, and neatly marketed.  
 A grower can pay for his land in a  
 single season with a good crop of ber-  
 ries.

## Nearly Smothered.

Chandler, N. C.—Mrs. Augusta  
 Lomax, of this place, writes: "I had  
 smothering spells every day, so bad I  
 expected death at any time. I could  
 not sit up in bed. I suffered from  
 womanly troubles. My nerves were  
 unstrung. I had almost given up  
 all hope of ever being better. I  
 tried Cardui and it did me more  
 good than anything I had ever tak-  
 en. I am better now than I ever ex-  
 pected to be." Thousands of ladies  
 have written similar letters, telling  
 of the merits of Cardui. It relieved  
 their headache, backache and misery,  
 just as it will relieve yours. You  
 will let it. Try Cardui.—Advertiser
